

HOW TO CHALLENGE YOUR FLOOD STATUS In Three Simple Steps

STEP 1 | Review Your MyFloodStatus Report

It all starts with an official Flood Determination Report from MyFloodStatus, powered by WTG.

Our reports will clearly identify the location of a habitable structure in relation to a Special Flood Hazard Area (SFHA), and include detailed, pinpoint accurate maps for visual verification.

STEP 2 | Contact Our Experts

Call 855-653-5663 to speak to our Flood Resource Center. Our Certified Floodplain Managers (CFMs) will review and explain the report, and advise on next steps available to you. For example:

If a property IS NOT located in an SFHA and has been misidentified by a mortgage or insurance company, our team will provide support, guidance and knowledge to help get an incorrect determination overturned.

If a property IS located in an SFHA, our team will provide guidance on obtaining an Elevation Certificate (EC) and/or a Letter of Map Amendment (LOMA) that can potentially alleviate or decrease flood insurance costs.

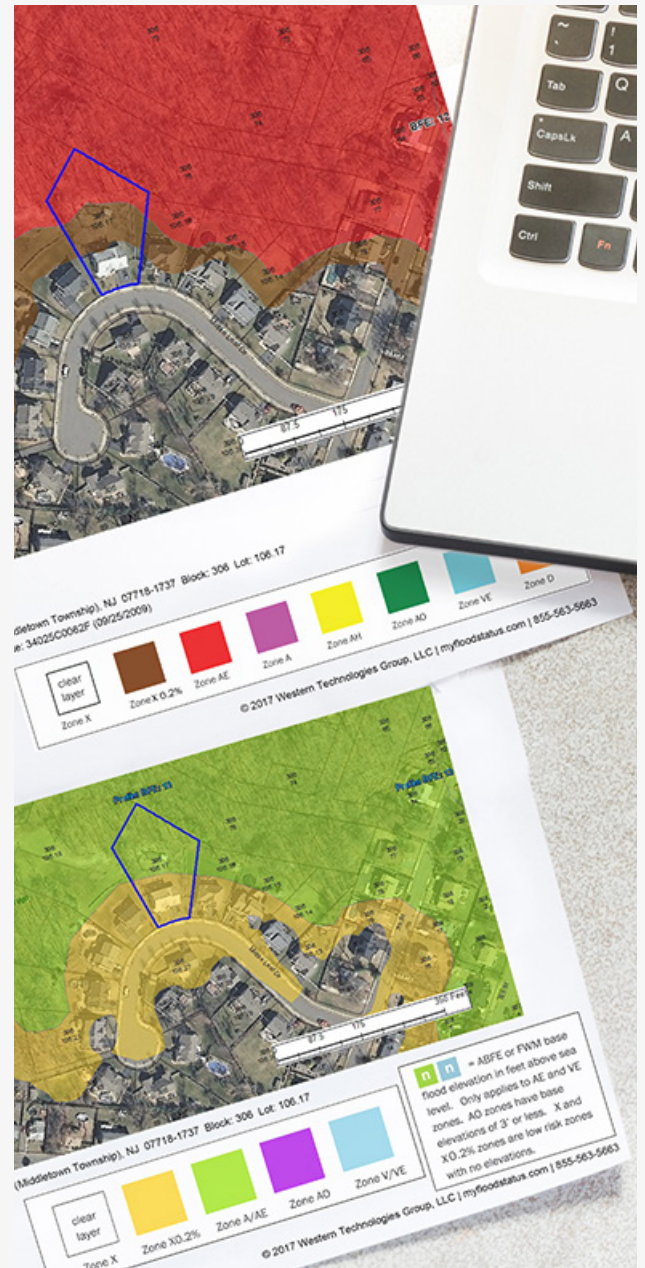

STEP 3 | Order Additional Flood Evaluation Services As Recommended

If an EC or LOMA are needed, our team can help. First, secure an elevation certificate from a licensed surveyor. We can then initiate your LOMA or eLOMA application using that EC and a copy of the most recently filed deed.

LOMA's and eLOMA's are processed outside of our system, carrying their own charges and time lines:

- LOMA application (6-8 weeks to process) \$150
- eLOMA application (1-10 business days) \$400

Our team will happily advise on next steps and costs.

Property address has been changed for privacy.
